WORKFORCE MANAGEMENT SOLUTIONS

## The Checkmate Advantage

Checkmate is an independent provider of comprehensive payroll services and workforce management solutions. Founded in 1994, we serve more than 500 clients in greater New Hampshire, are growing rapidly, and are actively involved in the communities we serve.

## WebApps – Our Technology Backbone

Checkmate's technology provides clients with an end-to-end workforce management portal. The backbone of our services is based on a comprehensive software hub developed by SaaS<sup>hr</sup>.com a leading Software as a Service (SaaS) company. We customize the software to fit the unique needs of our clients.

**Dashboard Driven Navigation** ensures that users can easily move between different sections of the system.

**Employee and Manager Self Service** enables employees to access current and historical pay statements via the web; administrators have access to a robust online payroll reporting solution and can view information related to their staff and approve any change requests.

**GreenPay** is a paperless one-stop payroll solution that will save clients money, time and resources.

**Role-Based Permissions** are highly configurable so we can create rules for clients about individual access, what data users can see and what operations they can perform.

**Global Benefit Plan Management** enables clients to maintain benefit plans at a global level and assign coverage levels within the plan to each employee. This allows for mass editing when the premiums change.

**Calculations-As-You-Go:** If a question arises about the proper withholdings and deductions behaving as anticipated, you can immediately see what your payroll will look like when finalized. With no pre-processing steps, pay statements and payroll reports are continually updated in real time, including taxes, percentage deductions, arrearages, general ledger, labor distribution and workers' compensation.

**Audit Trail Reports** are available for all applications, enabling clients to see all system activity – down to a user's specific IP address.

Managing your greatest asset – your workforce – with an effective TLM solution is critical to maintaining a competitive edge. WebApps Time & Labor is provided in a “no frills” small business edition or as a robust mid-market solution that includes modules for Employee Scheduling, Project Tracking and Expense Reimbursements. WebApps TLM also enables fast and accurate time and attendance data capture from various web timesheet formats and virtually any data collection terminals, including biometric and telephony.

WebApps HR gives Checkmate clients an edge through our end-to-end workforce management platform. From Applicant Tracking, to Performance Management, Compensation Analysis and Benefits Administration, WebApps HR provides the tools to manage, retain and reward your workforce. WebApps HR is also available in a “no-frills” small business edition or as a robust mid-market solution that includes modules for Incident Tracking, OSHA Reporting, Workers Comp Claims and FMLA Management.

## Peace of Mind

With this modular approach and Checkmate’s strategic partnership with SaaShr, our

customers have peace of mind because they have a secure, flexible and reliable workforce management solution in place. Contact us today to learn more about the Checkmate advantage.

*“By partnering with SaaShr, we’re bringing today’s technology to our clients and improving their whole concept of workforce management. Specializing in payroll and workforce management automation on our end allows our clients to spend more time on their core business, increasing output, and generating more profits.”*

*Joshua Robinson, Checkmate*
